

Homework Chapter 05, ISTA-322

ISTA-322, ASP.NET MVC

Readings

Read chapter 5, pages 95 – 118 in the *Pro ASP.NET MVC 5* book.

Discussion Questions

Answer the discussion questions in writing for chapter 5.

1. What is a *view engine*?
2. What is *Razor*?
3. What do *views* do? List two specific things in your answer to this question.
4. How does Razor respond when it encounters statements that begin with the at character (@)? Be specific.
5. How does Razor respond when it encounters statements that begin with the at character followed by the colon (@:)? Be specific.
6. Describe how you implement a standard formatting for all pages in an ASP.NET application.
7. What is the difference in using Razor to interpolate data values as stand-alone HTML elements and as attributes to HTML elements. What is the similarity?
8. What is a *view start file* and where is it located?
9. What is a Razor *code block*? What is the syntax of a Razor code block?
10. Describe the different roles of action methods and views.
11. Describe the use of the *@using* statement. Give an example of how you would use it.
